

DENSO Connect

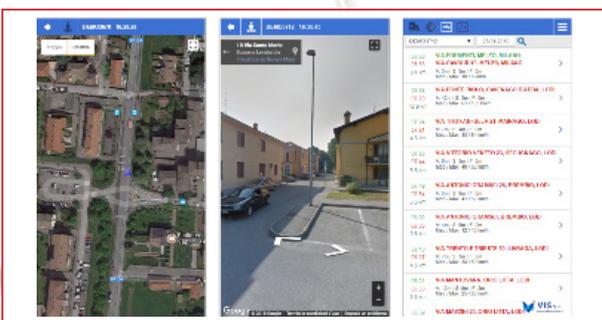

The solution for the monitoring of a vehicles fleet under controlled temperature

Denso Connect is the satellite monitoring system, designed specifically for the vehicles with a cargo room under controlled temperature.

Thanks to a simple and intuitive interface, the fleet controller can monitor in real-time, from any device the vehicle position on the territory and the temperature on board (until a maximum of 4 sensors).

The highlights of the system are the customized control of the alarms and the possibility to display, **print and send** by e-mail, in real-time the temperature reports.

DENSO Connect

It's an exclusive application characterized by:

- A GPS/GSM Locator without commodatum
- A SIM and data traffic with different contractual options chosen by the customer
- A vehicles control software online with two service profiles (Basic and Can Bus) and a series of optional functions chosen by the customer
- A Smartphone locator
- A monitoring of the temperature and functional parameters of the refrigeration system with the possibility to send printable reports by e-mail
- Remote assistance from 24 h since the registration of the malfunctioning
